Hi Regan (and all)

Thanks for meeting with me last week and having an initial chat about my requirements for a deployment/imaging server in D312. The immediate use of this server is to support the deployment of computer images onto repurposed computers that will be given away to people who need computers.

I will require a few different images of a few operating systems for a few different system specs. There will need to be both the flexibility and instructions provided for both the use of the server/deployment but also how to easily add new images to the system in the future.

I am happy to meet with whoever from the team are assigned to this project and discuss my requirements further.

Hopefully we can get this underway next week and so do get back to me with a time next week that suits you for an initial meeting and who will be involved from your team.

If any of you happen to be free at 1:00pm today (Friday 18th) then there will be some of us looking at the computers to be repurposed in D312. Feel free to pop up and have a look.

I have attached a copy of those current instructions that I handed you last week.

Looking forward to hearing from you.

Thanks

Hamish
